

# Let Our Team Build a Bridge For You

## An attractive and practical addition to your property

Enhance the beauty and usability of your property with the addition of a bridge over a creek, gully or ditch. Walkers, horseback riders and bicyclists will appreciate the opportunity to easily cross what otherwise might be impassable terrain.

## We can construct a bridge to meet your needs

The bridge pictured above is one of several available designs. This bridge has a 35' span and can accommodate foot, bicycle, horse and limited vehicle traffic. It's 8' wide, has a 54" high railing and can handle a 10,000 lb. load. During installation, we utilize techniques which minimize encroachment of natural areas. When crossing a creek, for example, we emphasize installation techniques such that no abutments, barriers or footings are placed below the high water mark.
