

We Provide Natural Solutions to Landscape Challenges

Recapture the beauty, value, and function of your land and water resources Alteration of our native woodlands, wetlands, and prairies has eroded these diverse landscapes and stolen their complex beauty. By restoring native plant communities, we can reduce maintenance costs, increase property value, and bring back the vibrant colors, seasonal interest, and native wildlife that enrich the present and build for the future.

Tallgrass Restoration, LLC is the natural choice

Our environmental scientists and licensed professionals have the experience and qualifications to restore your property to its natural state. Our cost-effective projects for public and private customers range from backyards to vast acreages. We are committed to establishing ecologically sustainable landscapes that benefit the larger environment, enriching the natural heritage of people, plants and animals.

“We must learn to mould the land so that nature and people can both thrive.”

- Richard Forman, professor of landscape ecology, Harvard
